

## 15LS, 15LN, 15SS & 15SN Series Right Angle Drills

	15	L	X	2	X	X	-	X	X
<b>Product Classification</b> 15 = Drill									
<b>Trottle Type</b> L = Locking Lever									
<b>Motor Size</b> S = 0.6 hp N = 0.9 hp									
<b>Handle Style</b> 2 = Right Angle									
<b>Exhaust Type</b> 5 = Front Exhaust 8 = Rear Exhaust									
<b>Speed Options (RPM)</b>									
<b>500 Angle Head</b>	<b>600, 700, 45°, 360° Angle Heads</b>								
<b>15LS/15LN</b>	<b>15LS/15LN</b>								
1 = 3,800/3,500	1 = 5,430/5,000								
2 = 2,360/2,170	2 = 3,370/3,100								
3 = 1,410/1,300	3 = 2,010/1,850								
4 = 1,160/1,070	4 = 1,660/1,530								
5 = 950/870	5 = 1,360/----								
6 = 590/540	6 = 840/----								
7 = 350/320	7 = 500/----								
8 = ----/4,200	8 = ----/6,000								
<b>Termination Code: Angle Head Type</b>									
4 = 45° Mini Angle Head					7 = 700 Series Angle Head				
5 = 500 Series Angle Head					9 = 360° Mini Angle Head				
6 = 600 Series Angle Head									
<b>Termination Code: Output Type</b>									
1 = #10-32 Output Spindle					4 = 5/16-24 Output Spindle				
2 = 1/4-28 Output Spindle					9 = 1/4 Capacity 3 Jaw Chuck (500 series head)				
3 = 9/32-40 Output Spindle

## SAFETY FIRST!

### ALWAYS COMPLY WITH:

1. General Industry Safety & Health Regulations, Part 1910, OSHA 2206, available from: Sup't of Documents; Government Printing Office; Washington DC 20402
2. Safety Code for Portable Air Tools, ANSI B186.1 available from: American National Standards Institute, Inc.; 1430 Broadway; New York, NY 10018
3. State and Local regulations.

Portions of the above codes and regulations are listed below for quick reference.

**THESE EXCERPTS ARE NOT INTENDED TO BE ALL INCLUSIVE – STUDY AND COMPLY WITH ALL REGULATIONS!**

WARNING

FAILURE TO COMPLY WITH ALL SAFETY REGULATIONS MAY RESULT IN SERIOUS INJURY.

1. **TOOL INTENT** — Tools shall be used only for purposes intended in their design (refer to product catalog).
2. **AIR SUPPLY** — Test and operate tools at 90 PSIG maximum unless tool is marked otherwise. Use recommended airline filters—regulators—lubricators.
3. **UNUSUAL SOUND or VIBRATION** — If tool vibrates or produces an unusual sound, repair immediately for correction.
4. **OPERATOR PROTECTIVE EQUIPMENT** — Wear goggles or face shield at all times tool is in operation. Other protective clothing shall be worn, if necessary. SEE REGULATIONS.
5. **SAFETY MAINTENANCE PROGRAM** — Employ a safety program to provide inspection and maintenance of all phases of tool operation and air supply equipment in accordance with “Safety Code for Portable Air Tools.”

### Safe Work Practices Symbol

WARNING

The signal word “Warning” identifies all notes on safe work practices in this operating instruction, alerting to hazards for life and health of people. Observe these notes and proceed with special care in the cases described. Pass all safety instructions on to other operators. In addition to the safety instructions in this operating instruction, the general local safety and accident prevention rules must be observed.

### Important Notes

CAUTION

The signal word “caution!” identifies all portions of this operating instruction meriting special attention to ensure that guidelines, rules, hints and the correct work procedures are observed; and, to prevent damage to and destruction of the machine and/or parts.

**1** The number in a square is a “service note” reference indicating additional information for the correct assembly or disassembly of this product. See Service Note page at end of this manual.

(●) Indicates recommended spare part (or set) for every five (5) tools. Small, low cost or easily lost parts should be stocked as 3-4 per 10 tools.

WARNING

*Disconnect the air supply hose before servicing the tool.*

## INSTALLATION & OPERATION

### All 15LN2.. & 15LS2.. models covered by this parts list...

These models are lever operated horizontal-type motors with angle heads. The operator actuates and releases the lever which starts and stops the air motor, gearing and output spindle.

For best tool performance, a working air pressure of **90 pounds per square inch** is recommended. Piping, fittings and hose should be adequate to maintain **90 psig** while the tool is in operation. An air line filter and lubricator, such as Cooper Power Tool’s #F02-M Filter (1/4” NPT) and #L02-EP Lubricator (1/4” NPT) should be used (**refer to Cooper’s “F-R-L” brochure**). Hose should be blown out before attaching to the tool.

### LUBRICATION

#### Motor

Lubricate the motor with an air line lubricator, using a light air tool oil. Adjust the lubricator to dispense one drop per cycle or three drops per minute. This oil is available in one (1) quart (540397) or one (1) gallon (533485) quantities. A high film strength oil (536333) is also available;

this oil cannot be used in Atomist type lubricators, use only with Economist or serv-oil type lubricators.

#### Planetary Gearing

Thoroughly grease all gears with Cooper Power Tools teflon grease every 100,000 cycles. Whenever the tool is disassembled, pack the gearing with approximately 1/4 ounce of grease. Teflon grease is available in one (1) pound cans (513156) or two (2) oz. tube (540395).

Establish a routine inspection and re-lubrication program, **don’t short cut**. Re-lubricate planetary by filling 1/3 to 1/2 full. Midget grease fittings are provided on the gear housings and internal gears for external lubrication. Too much grease will cause overheating.

CAUTION

*Do not use substitutes for oil and grease. This could result in damage to the tool.*

#### Angle Head Gear Lubrication

When angle head gearing is replaced, wipe on a **thin** coat of Molykote, grade G; only a small amount is necessary. An 8 ounce tube is available under part number 540394. Molykote has been shown to improve the wearing characteristics of angle gearing.

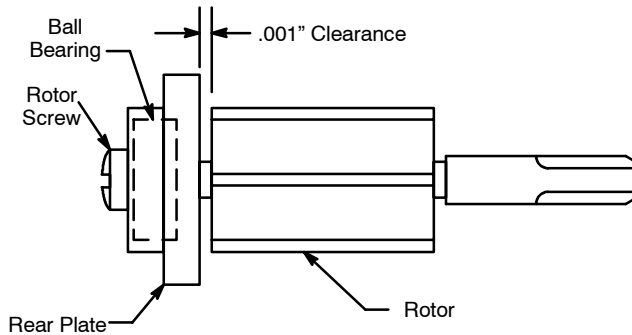

## PARTS INSPECTION

1. Wash all parts except ball bearings in solvent. Dry and place on a clean cloth for inspection.
2. Check ball bearings for wear. Bearings should turn smoothly with no appreciable shake or looseness.
3. Check rotor blades for wear by comparing with a new blade. Replace if worn more than 1/32" in height.
4. Check motor cylinder for grooves, gouges or pitting. Honing is permissible, however, never remove more than about 0.001" or 0.002" of material. Replacement is usually recommended.

## DOTCO® 15LS2.. & 15LN2.. Series SERVICE NOTES

### 1 SERVICE NOTE 1:

Assemble rotor to rear plate/bearing assembly with the rotor's retaining screw. *Position and set the rotor as close as possible to the rear plate, without dragging or rubbing.*

- a. A good practice is to stone the blade slots and polish the ends with a medium grit emery cloth.
- b. Assemble components making sure the bearing is firmly seated in the rear plate.

*Caution!* Begin tightening the rotor screw but do not over-tighten. This could cause damage to the bearing. Alternately spin the rotor while tightening the screw until a clearance of approximately 0.001" is achieved.

Hold the rotor and rear plate assembly vertically (plate downward) and strike the edge of the plate with a wood block. This helps seat the threaded components.

### 2 SERVICE NOTE 2:

#### TIMING OF THE STEP REDUCTION GEAR ASSEMBLY

Assemble the planet gears into the planet cage, making sure the notched planet pins fit over the planet cage washer. Rotate each gear until the aligning hole — on the end of one gear — is diametrically opposite the "X" mark of the other gear. Hold the gears in this position and slip the planet cage into the internal gear. This is important to avoid "wiping out" the gear teeth.

This is the only position where the gear teeth are lined up.
